

1. Write a query to get the marks by subjects (using groups) ?

```
Select std_subject, sum(std_marks) as Total_Mark from std_details  
Group by stu_subject;
```

2. Write a query to print the highest, lowest, average marks of students in a single query ?

```
Select  
    Max(std_marks) as Highest_marks,  
    Min(std_maeks) as Lowest_marks,  
    Avg(std_marks) as Average_marks  
From std_details;
```

**3.Create a table for Food, add your fav food items ,its category and price.
For eg: Food item: biscuit Category: Snacks Price: 50.00 Now display the
result of Food item whose price should be less than 100 and group it by
Category?**

```
create table Food (  
    food_items varchar(30),  
    category varchar(30),  
    price decimal(10,2)  
);  
insert into Food values ('Biryani','Lunch',150.25),  
    ('Rice','Lunch',70.00),  
    ('Noodles','Dinner',90.10),  
    ('Icecream','Dessert',50.00),  
    ('Pizza','Dinner',80.00);  
select category, count(*) as Total_items from Food  
where price < 100  
group by category;
```

Output:
